

Protecting Lives Against Infection™

Advanced Sterilization Products (ASP) is a leading developer of innovative instrument sterilization, high-level disinfection and cleaning technologies. The company is dedicated to protecting patients, healthcare workers, and the environment with products that focus as much on safety as they do on efficacy and cost effectiveness. Utilizing advanced instrument processing technologies, these products help customers to promote safe patient outcomes while controlling costs and increasing productivity.

Division of Ethicon, Inc.  
a *Johnson & Johnson* company

**WE ARE ASP**

Protecting Lives Against Infection.™

# For Life's Most Vulnerable Moments

**Every day, millions of people around the world visit a healthcare facility.** It may be a mother giving birth, a grandfather receiving routine treatment or a parent visiting a sick child. What they all have in common is the desire to leave the hospital as healthy *or healthier* than when they entered. But sadly, healthcare-associated infections (HAIs) are increasing around the world.

To help put a stop to this increasing trend, ASP is striving to create the safest possible environments for patients and their families, healthcare workers, providers and communities.

Welcome to ASP – a company dedicated to designing and delivering innovative technology that improves patient care through infection prevention.

# Our Vision

ASP will become Johnson & Johnson's infection prevention leader and will strive to create the safest possible environments for patients and their families, healthcare workers, providers and communities.

# Our Mission

By living the Johnson & Johnson Credo, we will anticipate, meet and exceed customer needs and develop integrated solutions using innovative technologies that dramatically reduce the human and financial costs of nosocomial (healthcare-acquired) infections. We will strive without reserve for the greatest possible reliability and quality in our products; to be the unsurpassed standard of comparison and to be recognized as a company of dedication, honesty, integrity and service.

# Protecting Patients from HAIs.

ASP has four business platforms to help healthcare facilities in their efforts to raise the standard of care for patients by providing a full spectrum of protection against three main sources of infection: medical devices, the environment and human contact.

Terminal Sterilization

High-Level Disinfection

Healthcare Environmental  
Decontamination

Hand Hygiene

# Community and Environment

**ASP is dedicated to supporting our local and world communities.**

We uphold our responsibility through associate-driven philanthropy and contributions to a variety of educational programs and community programs through educational grants and charitable donations.

**Improving its overall environmental footprint is a prime company concern.** ASP uses an energy management system, purchases renewable energy and participates in energy conservation programs. ASP also has a recycling program that has dramatically reduced the amount of non-hazardous waste generated.

# Our History of Innovation

Spanning five decades with core competencies in chemistry, physics and microbiology.

Every day, thousands of healthcare facilities in more than 160 countries worldwide count on ASP to provide products and services that promote safety, efficacy and peace of mind.

\*This is a representation of the global portfolio of ASP. Not all products pictured above are available in all global markets.

# ASP Business Platform: Terminal Sterilization

ASP has made safety a top priority in the operating room, central sterilization departments and outpatient surgery centers with **STERRAD® Sterilization Systems**. Using a unique hydrogen peroxide gas plasma technology, over 16,000 STERRAD® Systems are installed around the world, and millions of sterilization cycles have been successfully run for patients.

ASP also provides the STERRAD® STERILITY GUIDE (SSG), which is an easy-to-use tool designed to provide customers with an up-to-date list of approximately 10,000 devices that fall within sterility claims.

# ASP Business Platform: High-Level Disinfection

**For cleaning and disinfection of even the most delicate of endoscopes and medical devices, ASP high-level disinfection solutions provide rapid, reliable results.** ASP was the first to launch an automated cleaning and reprocessing solution– the EVOTECH® Endoscope Cleaner and Reprocessor (ECR). ASP also offers the CIDEX® Family of Products, which is the number-one trusted brand for high-level disinfection of medical instruments.

# ASP Business Platform: Healthcare Environmental Decontamination

The ASP GLOSAIR™ Healthcare Environmental Decontamination (HED) solution is designed to disinfect large and small spaces and surfaces within the healthcare environment.

Conventional disinfection methods of simply spraying and wiping chemicals are not enough to protect patients, staff, and communities from HAIs. By using GLOSAIR™ HED as a complement to traditional cleaning, you can provide healthcare facilities and their patients with increased confidence that their environment has been thoroughly and properly disinfected...even in the difficult-to-reach nooks and crannies.

# ASP Business Platform: Hand Hygiene

**ASP offers a full line of products that help healthcare professionals keep their skin clean, healthy and protected from infection.** Research shows that improved hand hygiene practices play a role in reducing HAIs, creating a safer platform for patient care. ASP MICROSIELD® Skincare Products include hand washing and hand care, hygienic hand disinfection, surgical hand disinfection and skin preparation.
